## PREFACE

With the editions for 1960, *The American Ephemeris and Nautical Almanac* issued by the Nautical Almanac Office, United States Naval Observatory, and *The Astronomical Ephemeris* issued by H. M. Nautical Almanac Office, Royal Greenwich Observatory, were unified. With the exception of the introductory pages i, ii and vi onwards, the two publications are identical; they are printed separately in the two countries, from reproducible material prepared partly in the United States of America and partly in the United Kingdom.

The title *The Astronomical Ephemeris* replaced, without loss of continuity of content, the previous title of *The Nautical Almanac and Astronomical Ephemeris* (usually abbreviated to *The Nautical Almanac*), which was introduced by Nevil Maskelyne for the original British edition of 1767; the title *The Nautical Almanac* is now used, in both the United Kingdom and the United States, for the unified edition of the Almanacs for surface navigation previously entitled *The Abridged Nautical Almanac* and *The American Nautical Almanac* respectively.

The unification did not require any substantial changes in either publication; but a number of revisions have been made to increase the precision and improve the usefulness. The contents are fully described in the *Explanation* at the end of the volume. The principal changes from the immediately preceding volumes are for the purpose of conforming to the recommendations of the Paris Conference on Astronomical Constants in 1950 and to the resolutions of the International Astronomical Union at the Zürich Assembly in 1948, the Rome Assembly in 1952, and the Dublin Assembly in 1955. These changes are described in the *Preface* to the volume for 1960. A few small changes have been introduced since 1960, but none have been made since the edition for 1966.

Although no data are now included in respect of occultations of stars by the Moon, the occultation programme of H. M. Nautical Almanac Office continues unchanged. Arrangements for the publication of predictions have been made as follows: for stations in the United States and Canada in *Sky and Telescope*; and for other Commonwealth stations in *The Handbook of the British Astronomical Association*. Machine copies of predictions for any of the stations for which predictions are made may be obtained from H. M. Nautical Almanac Office, on request.

The apparent places of the 1535 stars in the FK4 are available in *Apparent Places of Fundamental Stars*, published annually under the auspices of the International Astronomical Union, by the Astronomisches Rechen-Institut in Heidelberg. The apparent places of the 1483 stars with declinations in the range  $-81^{\circ}$  to  $+81^{\circ}$  are tabulated continuously at intervals of ten upper transits at Greenwich; those of the 52 circumpolar stars, including *Polaris*, are given for every upper transit at Greenwich. Each volume also contains, for purposes of record, the Besselian Day Numbers at 12<sup>h</sup> Greenwich sidereal time, without short-period terms, with which the apparent places of the 10-day stars are calculated. A separate list of mean places for the equinox of 1965.0 was published with the edition for 1965.

The star ephemerides that are needed by surveyors, including the tables relating to *Polaris*, are available in *The Ephemeris* prepared by the Nautical Almanac Office,

United States Naval Observatory and published by the U.S. Bureau of Land Management, and in *The Star Almanac for Land Surveyors* prepared by H. M. Nautical Almanac Office, Royal Greenwich Observatory and published by H. M. Stationery Office.

An *Explanatory Supplement* to the edition of this volume for 1960 (H. M. Stationery Office, London, 1961, reprinted 1962, price 42s.) contains detailed explanations of the data, together with a derivation and numerical illustrations, as well as useful permanent tables that are now omitted.

By international agreement, the basic calculations for this volume, and for other astronomical ephemerides such as *Apparent Places of Fundamental Stars*, and *Ephemerides of Minor Planets*, are shared between the ephemeris offices of a number of countries. Contributions, in addition to those listed below, are made by the Astronomisches Rechen-Institut in Heidelberg, the Institute for Theoretical Astronomy in Leningrad, and the offices of the *Connaissance des Temps* in Paris and the *Efemerides Astronómicas* in San Fernando.

The ephemeris of Universal and Sidereal Times, the ephemerides of the Sun, Moon, Mercury, Venus, Mars, Jupiter, Saturn, Uranus, and Neptune, the geocentric ephemerides of Ceres, Pallas, Juno, Vesta, and Pluto, the nutation in longitude and obliquity, the Day Numbers, and the Phenomena, are prepared in H. M. Nautical Almanac Office.

The conjunctions and phenomena of Satellites I–IV of Jupiter and the diagrams of the configurations are received from the office of the *Connaissance des Temps*. The data for forming Table II are received from the Astronomisches Rechen-Institut.

The remaining data in the volume are prepared in the Nautical Almanac Office, United States Naval Observatory, namely: mean places of stars; eclipses of the Sun and Moon; ephemerides for physical observations of the Sun, Moon, and planets; ephemerides of the satellites of Mars, Saturn, Uranus, and Neptune, and of Satellites V, VI, and VII of Jupiter, and of the rings of Saturn; local mean times of moonrise and moonset; Tables III, IV, and VI.

This volume was prepared jointly by H. M. Nautical Almanac Office, Royal Greenwich Observatory, under the immediate supervision of D. H. Sadler, and by the Nautical Almanac Office, United States Naval Observatory, under the immediate supervision of Raynor L. Duncombe and Ralph F. Haupt.

December, 1964

The British edition of this publication is the two-hundredth anniversary edition of the ephemeris first published for the year 1767 under the title *The Nautical Almanac and Astronomical Ephemeris*. Although the logical successor to that primarily nautical ephemeris is *The Nautical Almanac*, *The Astronomical Ephemeris* is also in direct line of descent both in regard to content and title. To mark this occasion there is included, in the British Edition, a short account of the contents of the first edition and of its subsequent development.

A similar account is given in the British Edition of *The Nautical Almanac* for 1967; and a separate publication "A Modern View of Lunar Distances" contains calculated lunar distances for a series of dates in February 1967 together with a comprehensive illustration of their use. A copy will be sent on receipt of a request addressed to the Superintendent, U.S. Naval Observatory, Washington, D.C., 20390.

The calculations for the principal ephemerides prepared in the Nautical Almanac Office, United States Naval Observatory, were made by the following members of the staff and their assistants: eclipses of the Sun and the Moon, SIMONE DARO GOSSNER; ephemerides for physical observations of the Sun, Moon, and planets, and ephemerides of the satellites of Mars, Saturn, Uranus, and Neptune, satellites VI and VII of Jupiter, and the rings of Saturn, CHARLOTTE KRAMPE; local mean time of moonrise and moonset, RALPH F. HAUPT and ARMSTRONG THOMAS. The editing and proofreading of these data are performed under the supervision of BERENICE L. MORRISON.

| 1919.5 | 19.83  | .000230  | 1944.5 | 26.08  | .000302  | 1969.5 |        |           |
| 1920.5 | 20.48  | .000237  | 1945.5 | 26.57  | .000308  | 1970.5 |        |           |
| 1921.5 | +21.06 | +.000244 | 1946.5 | +27.08 | +.000313 | 1971.5 |        |           |
| 1922.5 | 21.56  | .000250  | 1947.5 | 27.61  | .000320  | 1972.5 |        |           |
| 1923.5 | 21.97  | .000254  | 1948.5 | 28.15  | .000326  | 1973.5 |        |           |
| 1924.5 | 22.29  | .000258  | 1949.5 | 28.94  | .000335  | 1974.5 |        |           |
| 1925.5 | +22.55 | +.000261 | 1950.5 | +29.42 | +.000341 | 1975.5 |        |           |

The values given to whole seconds are extrapolated; those given to 0<sup>h</sup>1 are provisional values based on incomplete observational data. The values given to 0<sup>h</sup>01 are based on more extensive data; small corrections are sometimes applied when further data become available, but in general they may be considered practically final.

The values previous to 1949.5 are those of BROUWER, *Astronomical Journal*, 57, 133, 1952; his table of  $\Delta T$  extends over most of the 19th century.

378 Titan,  $e$ , multiply all values by 0.1

### *Explanatory Supplement to the Astronomical Ephemeris and the American Ephemeris and Nautical Almanac (First Edition)*

- 18 Volume XVI. For 1959      read 1958
- 37 For  $\omega_0 = \omega - b \sin (\Omega + c') \operatorname{cosec} i$       read  $\omega_0 = \omega - b \sin (\Omega + c') \operatorname{cosec} i$
- 38 For  $c = 180^\circ - \Pi_m - \frac{1}{2}a$       read  $c = 180^\circ - \Pi_m + \frac{1}{2}a$
- For  $c' = 180^\circ - \Pi_m + \frac{1}{2}a$       read  $c' = 180^\circ - \Pi_m - \frac{1}{2}a$
- 95 Line 22. For B.2.      read B.1.
- 98 Mean anomaly—the second expression for  $g$  requires an equals sign.
- 115 Mean elements of the outer planets. Jupiter,  $L$ , 1960 Jan. 1.5.  
For  $259^\circ 48' 52''.05$       read  $259^\circ 49' 52''.05$
- 264 Example 9.24. After  $\Delta L = -0''.90$  insert  
together with  $\Delta \log_{10} r = +0.0000$  026 instead of  $\Delta \log_{10} r = +0.0000$  011
- 367 Figure 12.6. For S Geocentric      read S Planetocentric
- 396 Kuiper, 1956. For I      read 2
- 442 Line 12. For Earth      read equinox
- 459 Line 14. For *Achstellige*      read *Achtstellige*
- 470 Table 16.3. Maximum differences in the fundamental ephemerides  
SUN Rectangular coordinates ( $X, Y, Z$ ) for  $\delta^4 = 2$       read  $\delta^4 = 12$
- NUTATION in obliquity      for  $\begin{matrix} \delta^2 & \delta^3 & \delta^4 \end{matrix}$  82 32 20      read  $\begin{matrix} \delta^2 & \delta^3 & \delta^4 \end{matrix}$  32 20 15
- MOON Ephemeris transit      for 160 20 10      read 270 95 30
- 491 Dimensions and rotations of the planets Add to footnote:  
The tabulated semi-diameters are the values adopted in the Ephemeris.

CHRONOLOGICAL CYCLES AND ERAS

|                             |     |     |    |                         |     |      |
|-----------------------------|-----|-----|----|-------------------------|-----|------|
| Dominical Letter            | ... | ... | A  | Julian Period (year of) | ... | 6680 |
| Epact                       | ... | ... | 19 | Roman Indiction         | ... | 5    |
| Golden Number (Lunar Cycle) |     |     | XI | Solar Cycle             | ... | 16   |

All dates are given in terms of the Gregorian calendar.

January 14 corresponds to January 1, Julian reckoning.

Julian Day 243 9492 begins at Greenwich mean noon on January 1.

The Julian Day begins at noon.

The fraction of the year,  $\tau$ , measured from the beginning of the Besselian solar year, is given on pages 258–272. For the first half of the year, on pages 258–264, it is measured from 1967.0 or 1967 January 1<sup>d</sup>.041; for the second half of the year, on pages 266–272, it is measured from 1968.0 or 1968 January 1<sup>d</sup>.283.

The Julian Day begins at noon.

The fraction of the year,  $\tau$ , measured from the beginning of the Besselian solar year, is given on pages 258-272. For the first half of the year, on pages 258-264, it is measured from 1967.0 or 1967 January 1<sup>d</sup>.041; for the second half of the year, on pages 266-272, it is measured from 1968.0 or 1968 January 1<sup>d</sup>.283.

## ECLIPSES

|                                    |  |
|------------------------------------|--|
| Total eclipse of the Moon, Apr. 24 | The Americas, Asia, Australasia            |
| Partial eclipse of the Sun, May 9  | North America, North Pole, Northern Europe |
| Total eclipse of the Moon, Oct. 18 | The Americas, Asia, Australasia            |
| *Total eclipse of the Sun, Nov. 2  | South Africa, Antarctica                   |

\* The axis of the shadow does not touch the Earth.

## OCCULTATIONS OF PLANETS AND BRIGHT STARS

| Date                     | Body   | Area of Visibility                             | Date                      | Body           | Area of Visibility      |
